

Enabling future-proof formulations without biocides

Our additive portfolio helps our customers achieve their targets

Since 2012, the EU-regulation Nr. 528/2012 regulates the manufacturing, identification, and use of biocide products to ensure the protection of humans, animals, and our environment. Countries around the world do the same. Biocides are chemicals or microorganisms which are commonly used to protect a material (especially liquids) against biological infestation and growth.

More and more strict regulations are in preparation or already set in place. In addition to this, customers request safer and more sustainable products that minimize the usage of biocides. To ensure future-proof formulations, Evonik Coating Additives supports paint and coating manu-

facturers in their strive for safer and more sustainable solutions. We offer a broad range of products that do not contain methylisothiazolinone (MIT), benzisothiazolinone (BIT), bronopol, and other classified materials.

This fact sheet presents an overview of products without biocides. If you like more detailed information, please check our regulatory data sheets. These documents provide comprehensive information on regulatory compliance, food contact status, and biocide content.
