

# ACEMATT® 3400

Raw material statement for paints and varnishes applications based on Commission Decision EU Ecolabel 2014/312/EU

## Function

Matting agent

ACEMATT® 3400 has not been classified as hazardous according to Regulation (EC) No. 1272/2008 [CLP] (Regulation (EC) No. 1907/2006 (REACH) Article 31, Annex II as amended).

## Content of hazardous components

ACEMATT® 3400 contains the following dangerous ingredient above 0.01% according to Regulation (EC) No. 1272/2008 [CLP] which is subject to restrictions according to Ecolabel (2014/312/EU) because of their GHS classification and the Substances of Very High Concern at a concentration of higher than 0.10%:

Chemical Name	CAS-No.	Content %	Classification	Notes
Octadecan-1-ol, ethoxylated, < 2.5 EO*	9005-00-9	approx. 0.3	H411, 2 Aquatic Chr.	surfactant*

\*Please note that this component is a surfactant. For the specified concentration limits of the surfactants please refer to the Appendix 4 (a) of *5(a)(i) Derogations applying to substance groups of Ecolabel (2014/312/EU)*.

## Criteria in Article 57 of the REACH Regulation & SVHC substances

Please refer to Regulatory Data Sheet and EU-SDS on our homepage:

<https://www.coatino.com/en/product-list>

## VOC (volatile organic compounds) – content

Determined by calculation based on the ingredients and raw materials: ≤ 0.2%

## SVOC (semi volatile organic compounds) – content

Determined by calculation based on the ingredients and raw materials: ≤ 0.2%

## Nanomaterials according to Commission Recommendation 2022/C229/01 EU (adapted to the REACH)

This product contains silicone dioxide CAS# 112945-52-5, which meets the definition of nanomaterials set out in above mentioned recommendation. This component is not classified as hazardous according to the legislation in force.

### **Absence of substances**

In the production process of ACEMATT® 3400 we do not intentionally use or add the substances listed below:

- Isothiazolinone compounds:
  - 2-octyl-2H-isothiazol-3-one (OIT)
- 3-iodo-2-propynyl butylcarbamate (IPBC)
- Zinc pyrithione
- N-(3-aminopropyl)-N-dodécylpropane-1, 3-diamine
- Zinc oxide
- Alkylphenoethoxylates (APEOs) and their derivatives
- Long chain perfluorinated surfactants :
  - Perfluorocarboxylic acids
  - Perfluoroalkyl sulfonates
- Metals and their compounds:
  - *Cadmium, lead, chromium VI, mercury, arsenic, barium, selenium, antimony and cobalt\**
- Phthalates:
  - DEHP (Bis-(2-ethylhexyl)-phthalate)
  - BBP (Butylbenzylphthalate)
  - DBP (Dibutylphthalate)
  - DMEP (Bis(2-methoxyethyl) phthalate)
  - DIBP (Diisobutylphthalate)
  - DIHP (Di-C6-8-branched alkylphthalates)
  - DHNUP (Di-C7-11-branched alkylphthalates)
  - DHP (Di-n-hexylphthalate)
- Adipic acid dihydrazide (ADH)
- Methanol
- Formaldehyde
- Volatile Aromatic Hydrocarbons
- Halogenated solvents

### **Crystalline silica and leucophyllite minerals containing crystalline silica**

Synthetic amorphous silica manufactured by flame hydrolysis or by precipitation in an aqueous solution is characterized by its amorphous structure. The determination method used on typical samples is enrichment of the crystalline fraction followed by X-ray Diffraction. The detection limit of this method is less than 0.1% by weight. The determination of arbitrarily selected samples shows no crystalline fraction above the detection limit. Under consideration of this result above mentioned silica is considered to be amorphous.

**\*Metals and their compounds (cadmium, lead, chromium VI, mercury, arsenic, barium, selenium, antimony and cobalt)**

In the manufacturing process we do not intentionally use or add any heavy metals and their constituents. The overall content of these elements, in their entirety, lies below 100 ppm.

The amount of measured metals (traces):

- Cadmium (Cd):  $\leq 1$  ppm
- Chromium, total (Cr):  $\leq 1$  ppm
- Mercury (Hg):  $\leq 1$  ppm
- Lead (Pb):  $\leq 1$  ppm
- Antimony (Sb):  $\leq 1$  ppm
- Arsenic (As):  $\leq 1$  ppm
- Selenium (Se):  $\leq 1$  ppm
- Barium (Ba):  $\leq 1$  ppm

The analysis for heavy metals is not part of our standard quality and production analyses. The limits given represent mean values from arbitrarily selected samples, but do not represent any specifications.

**Biocides**

ACEMATT® 3400 contains the following biocides:

Substance	CAS-No.	Amount [%]
1,2-Benzisothiazol-3(2H)-one	2634-33-5	< 0.0012
Reaction mass of: 5-chloro-2-methyl-4-isothiazolin-3-one [EC no.247-500-7] and 2-methyl-2H-isothiazol-3-one	55965-84-9	< 0.0001

---

The information given above is based on and represents our current compositional knowledge (based on the knowledge of the production process, supplier information for raw materials and analytical data where applicable).

Please note that Evonik Operations GmbH does not analyse whether the mentioned substances are contained, because the content of such substances is not part of our product specification or formulation.

We use raw materials of technical purity, therefore negligible amounts on the level of natural / technical impurities cannot be excluded.

In case of provided values these are considered to be typical concentrations and are not part of the product specification.

All provided information is based on our present knowledge and experience and is true and complete to the best of our knowledge and belief. However, no warranty, whether expressed or implied, or guarantee of product properties in the legal sense is intended or implied.

**In case of any questions concerning the provided information or if you need additional advice you are welcome to contact us:**
