

## Raw Material Statement concerning the European Ecolabel for Paints and Varnishes (Commission Decision 2014/312/EU)

**Product Name:** AEROSIL® 300  
**Chemical name:** Silicon dioxide, chemically prepared  
**CAS-No.:** 112945-52-5, 7631-86-9

Above mentioned product is a non-hazardous single substance and not a mixture.

Ingredients/substances/preparations/mixtures as well as any additional functional ingredients and known impurities that are present at concentrations in the product of greater than 0,010% (100 ppm)

**Nanomaterials according to Commission Recommendation 2022/C 229/01 on the definition of nanomaterial**

This product meets the definition of nanomaterials set out in Recommendation 2022/C 229/01 on the definition of nanomaterial.

**The following information is available in our Safety Data Sheet (SDS):**

Hazard Identification, Composition/Information on Ingredients, REACH-Registration number (if available), (SVHC) Substances of high concern (if applicable), First Aid, Fire Fighting Measures, Accidental Release Measures, Handling and Storage, Exposure Control/Personal Protection, Physical and Chemical Properties, Stability and Reactivity, Toxicological and Ecological Information, Disposal Considerations, Risk Information (e.g. Transportation, Labeling, Risk Phrases). The Water Hazard Class (WGK) is only in the German version of the safety data sheet available. Please, pay attention to the national edition of the SDS.

**References:**

- In the production process of this product we do not intentionally use or add any of these substances. The analysis on these substances is not part of our standard quality and production analyses. Therefore, we cannot warrant or guarantee the absence or level of these substances to any specific limit or threshold value.
- In the production process of this product, we do not intentionally use or add any heavy metal constituents. The overall content of Cadmium (Cd), Lead(Pb), Chromium (total, Cr) Mercury (Hg), Arsenic (As), Barium (Ba), Selenium (Se), Antimony (Sb) and Cobalt (Co), in their entirety, lies below 100 ppm.  
The limit given represent typical values from arbitrarily selected samples, but do not represent any specifications. A total content method was used.
- Synthetic amorphous silica manufactured by flame hydrolysis or by precipitation in an aqueous solution is characterized by its amorphous structure. The determination method used on typical samples is enrichment of the crystalline silicon dioxide fraction followed by X-ray Diffraction. The detection limit of this method is less than

0.1% by weight. The determination of arbitrarily selected samples shows no crystalline silicon dioxide fraction above the detection limit. Under consideration of this result this silica is considered to be amorphous.
